

what's happening with pbuilder?

Debian Conference 2007

dancer@debian.org

June 2007

Who is this guy?

- ▶ Junichi Uekawa, dancer@debian.org
- ▶ Lives in Japan, Leading Debian JP for 2007
- ▶ Debian Developer since 2000
- ▶ Interests: Audio-processing related tools, and Debian quality maintenance related tools, Japanese localization, shared library packaging, and more recently, Debian/MacBook related.

Agenda?

- ▶ pbuilder
- ▶ pbuilder-uml
- ▶ cowbuilder
- ▶ qemubuilder

A thick, hand-drawn style pink spiral graphic that starts from the center and expands outwards, partially framing the text on the left.

pbuilder, what is
the concept?

A thick, hand-drawn style pink spiral graphic that starts from the center and expands outwards, framing the text on the left side of the image.

What is a chroot?

concept of a chroot

```
# chroot
```

```
/var/cache/pbuilder/build/XXX
```

```
bin/bash
```

concept of pbuilder

```
# pbuilder --XXXX
```

How do I use
pbuilder?

installing pbuilder

```
# apt-get install pbuilder
# vi /etc/pbuilderrc
# evince
  /usr/share/doc/pbuilder/
    pbuilder-doc.pdf
```

pbuilder basics

- ▶ done once to create base filesystem.
- ▶ twice a day to follow unstable updates, to revise base filesystem.
- ▶ for each package build to build Debian package inside chroot.

pbuilder --create

```
# pbuilder --create
Distribution is sid.
Building the build environment
-> running debootstrap
/usr/sbin/debootstrap
I: Retrieving Release
I: Retrieving Packages
I: Validating Packages
.
.
```

pbuilder --update

```
# pbuilder --update
```

```
W: /home/dancer/.pbuilderrc does not exist
```

```
Building the build Environment
```

```
-> extracting base tarball [/var/cache/pbuilder]
```

```
.
```

```
.
```

pbuilder --build

```
# pbuilder --build dsh_*.dsc
I: using fakeroot in build.
Current time: Sat Jan 20 12:03:34 JST
pbuilder-time-stamp: 1169262214
Building the build Environment
-> extracting base tarball [/home/dan
-> creating local configuration
.
.
```

pbuilder --login

```
# pbuilder --login --bindmount ${HOME}
I: using fakeroot in build.
Current time: Sat Jan 20 12:03:34 JST
pbuilder-time-stamp: 1169262214
Building the build Environment
-> extracting base tarball [/home/dan
-> creating local configuration
.
.
```

pdebuild

pdebuild

```
$ ls debian/rules
debian/rules
$ pdebuild
W: /home/dancer/.pbuilder.rc does not exist
dpkg-buildpackage: source package is c
dpkg-buildpackage: source version is 0
dpkg-buildpackage: source changed by J
dpkg-buildpackage: source version with
 fakeroot debian/rules clean
dh_testdir
```

How do you maintain your package today?

pbuilder backend variations

- ▶ LVM
- ▶ UML
- ▶ cowdancer
- ▶ qemu

Motivation

- ▶ limitation in chroot segregation (process space, filesystem)
- ▶ COW filesystem optimization (tarball extraction slow.)

uml

different method of segregation
COW block device support

cowbuilder

Speed up through use of copy-on-write filesystem.

Just a matter of:

```
# cp -al  
    /var/cache/pbuilder/base.cow  
    /var/cache/pbuilder/build/XXX  
# chroot  
    /var/cache/pbuilder/build/XXX  
cow-shell
```

Concepts of cowdancer

- ▶ Usage: hardlink files, LD_PRELOAD libcowdancer.so; trap libc calls likely to cause file writes (open, etc) and break the hardlink.
- ▶ light-weight compared to other solutions (no extra partition, no LVM, no extra kernel modules/patches)
- ▶ cow-shell into it.

qemubuilder

Try running other architectures at your fingertips?

qemubuilder example config

```
KERNEL_IMAGE=2.6.18-4-mips-di-vmlinux  
INITRD=2.6.18-4-mips-di-initrd.gz  
ARCH=mips  
BASEPATH=  
    /var/cache/pbuilder/base-mips.qemu
```

qemubuilder details... create

qemubuilder details... build

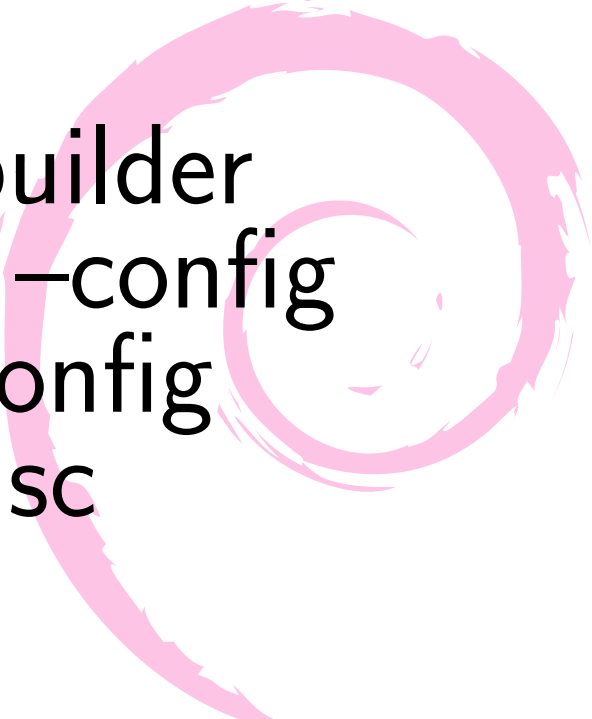

A thick, hand-drawn style pink spiral graphic that starts from the center and expands outwards, partially framing the text on the left.

qemubuilder
-create -config
mips.config

A thick, hand-drawn style pink spiral graphic that starts from the center and winds outwards, occupying the right half of the image.

qemubuilder
-update -config
mips.config

A thick, hand-drawn style pink spiral graphic that starts from the center and winds outwards, partially obscuring the text on the right side of the image.

qemubuilder
-build -config
mips.config
XXX.dsc

qemubuilder --login

```
$ sudo qemubuilder --login --config pb  
bash: /root/.pbuildererrc: No such file  
fsck 1.40-WIP (14-Nov-2006)  
e2fsck 1.40-WIP (14-Nov-2006)  
/home/dancer/tmp/base-mips.qemu: clean  
1+0 records in  
1+0 records out  
1048576 bytes (1.0 MB) copied, 0.02298  
mke2fs 1.40-WIP (14-Nov-2006)  
.
```

qemubuilder --login

```
.  
.   
.   
hostname: the specified hostname is in  
bound to 10.0.2.15 -- renewal in 35272  
bash: no job control in this shell  
root@pbuilder-coreduo:/#
```

further ideas

- ▶ install testing
- ▶ package testing

related tools

- ▶ schroot
